

## Thin Film Solar Filters for Binoculars

Spectrum Telescope's Thin Film Solar Filters for Binoculars are full aperture filters made from the same black polymer film as the telescope filters. The filters are sold as a pair, are mounted in an aluminum cell, and securely

attach to the binocular tubes by a nylon thumb screw.

Filters are packaged in a foam lined box perfect for storing the filters when not in use. When properly used and stored the filters will last for many years.

Highlighted items are in stock and can be ordered in the Scopedawg shop. All other items can be ordered with the order form on the filters main page, shipped direct from manufacturer.
